

Session Plan -- Navon

Date: May 24, 2026 | Subject: Reading & Vocabulary | Topic: Vocabulary Review + Reading Comprehension + New Words Preview

ADMIN ONLY -- NOT FOR STUDENT

COACHING REMINDERS (READ BEFORE SESSION)

- Suspected IEP -- extra processing time always, no time pressure language ever, silence is thinking -- do not fill it
- Known misconception FRACTION_DENOMINATOR_ADD: Navon adds numerators AND denominators directly ($\frac{1}{2} + \frac{1}{3} = \frac{2}{5}$). Fix this first. Gate: 3 consecutive correct problems before moving to ratios.
- LCD box is a written labeled step every time -- write all 4 steps before touching each problem, every problem
- Visual model before algorithm every single time -- fraction bar first, then steps
- Celebrate milestones by name: 'You found the LCD -- that is the hardest step and you did it.'
- Frame everything as a head start: 'This is what 6th grade math looks like. You are seeing it in June.'

WARM-UP (0-10 MIN)

Segment 1 -- Fractions (0-15 min). Address FRACTION_DENOMINATOR_ADD directly: ask Navon to solve $\frac{1}{2} + \frac{1}{3}$ in his head. If he says $\frac{2}{5}$ -- draw the fraction bar model before any steps ($\frac{1}{2} = 3$ out of 6, $\frac{1}{3} = 2$ out of 6, together = $\frac{5}{6}$). Then write the LCD box on paper together: Step 1 -- Find the LCD. Step 2 -- Convert both fractions. Step 3 -- Add or subtract numerators only. Step 4 -- Simplify. He writes all 4 steps before every problem.

REVIEW (10-20 MIN)

Segment 1 gate -- 3 problems in order: (1) $\frac{1}{3} + \frac{1}{4} = \frac{7}{12}$, (2) $\frac{1}{2} + \frac{2}{5} = \frac{9}{10}$, (3) $\frac{3}{4} - \frac{1}{3} = \frac{5}{12}$. For each: he writes the 4 steps, finds the LCD, converts both fractions, operates on numerators only, simplifies. If he adds denominators on any problem -- go back to the fraction bar before continuing. 3 correct in a row = gate cleared, move to Segment 2. If not cleared by minute 12 -- note it and continue fractions next Wednesday.

NEW CONTENT (20-40 MIN)

Segment 2 -- Ratios (15-40 min). Frame it: 'This is what 6th grade math starts with. You are getting a head start.' Define ratio: comparing two quantities. Write: 3:1 means 3 of one thing for

every 1 of another. Real-life hooks -- basketball (6 makes, 2 misses = $6:2 = 3:1$; if 12 shots at $3:1$, how many makes?), food (2 cups flour per 1 cup sugar = $2:1$; if 6 cups flour, how much sugar?), money (\$3 saved per \$1 spent; if spent \$5, how much saved?). Teach all 3 written forms: '3 to 2', ' $3:2$ ', ' $\frac{3}{2}$ '. Two practice problems writing ratios from real situations. Close with equivalent ratios -- connect to equivalent fractions: multiply both sides by the same number.

INDEPENDENT PRACTICE (40-50 MIN)

Segment 3 -- Negative Numbers (40-60 min). Plant the seed -- preview only, not mastery. Frame it: 'Most students see negative numbers for the first time in September. You are seeing them in June.' Three real-world anchors: temperature (Detroit in January, -8 means 8 below zero), money (have \$0, spend \$5, now at -\$5), building floors (ground = 0, basement 1 = -1). Draw number line -5 to 5 together. Ask him to place -3, 4, -1, 0. One rule only: further left = smaller. Introduce absolute value as a word only -- how far from zero, ignoring direction. Show $|-3| = 3$ and $|4| = 4$. Two practice problems. Close: ask him to name one real-life situation where negative numbers exist.

WRAP-UP (50-60 MIN)

Final 2 min. Name one specific thing Navon did better today -- be exact. Gate check: did he hit 3 consecutive correct fraction problems? If yes -- update progress.md: LCD method solid, FRACTION_DENOMINATOR_ADD misconception corrected. If no -- fractions are the priority again next Wednesday before ratios continue. Preview: 'Next Wednesday we go deeper on ratios. That is pre-algebra -- and you are going to be ready for it.'

HOMEWORK ASSIGNMENT

No written homework. Optional: spot one real-life ratio before next session -- a scoreboard, a recipe, a price sign. Wednesday sessions are math only.

ACTIVE ALERTS

- [MED] IEP -- Parent conversation about evaluation still pending. Handle diplomatically.
- [MED] Retention gap -- begin every session with a warm-up. Track whether fraction recall improves session over session.
- [GATE] Fraction gate: 3 consecutive correct problems with unlike denominators required before ratios content continues next Wednesday.
