

Session Plan -- Navon

Date: May 25, 2026 | Subject: Reading & Writing | Topic: Personal Challenge Essay

ADMIN ONLY -- NOT FOR STUDENT

COACHING REMINDERS (READ BEFORE SESSION)

- Learning accommodations: extra processing time always. Silence is thinking -- do not fill it.
- Chunk one step at a time. Never show the next problem until the current one is finished.
- Known misconception -- FRACTION_DENOMINATOR_ADD: Navon adds numerators AND denominators directly ($\frac{1}{2} + \frac{1}{3} = \frac{2}{5}$). Fix this first. Gate = 3 consecutive correct fraction problems before moving to ratios.
- Visual model before algorithm every time. Fraction bar or number line first, then LCD steps.
- Celebrate milestones by name: 'You found the LCD -- that is the hardest step and you did it.'
- Frame the whole session as a head start: 'This is what 6th grade math looks like. You are already ahead.'

WARM-UP (0-10 MIN)

Fractions gate -- Segment 1 (0-15 min): Write the LCD Box 4 steps on paper before touching any problem -- Step 1: find LCD, Step 2: convert both fractions, Step 3: add/subtract numerators only, Step 4: simplify. Before the first problem, ask him to solve $\frac{1}{2} + \frac{1}{3}$ in his head. If he says $\frac{2}{5}$, do not say wrong -- draw the fraction bar model ($\frac{1}{2} = \frac{3}{6}$, $\frac{1}{3} = \frac{2}{6}$, together = $\frac{5}{6}$) and walk the LCD steps alongside the visual. Problems in order: $\frac{1}{3} + \frac{1}{4}$ (ans: $\frac{7}{12}$), $\frac{1}{2} + \frac{2}{5}$ (ans: $\frac{9}{10}$), $\frac{3}{4} - \frac{1}{3}$ (ans: $\frac{5}{12}$). He writes all 4 steps and the LCD for every problem. 3 correct in a row = gate cleared.

REVIEW (10-20 MIN)

Gate check and transition (10-15 min): If gate not cleared by min 12, stay on fractions and note it. If gate cleared, transition: 'Fractions are solid. Now I want to show you what 6th grade starts with.'

NEW CONTENT (20-40 MIN)

Ratios intro -- Segment 2 (15-40 min): Write on paper: Ratio = comparing two things | 3:1 means 3 of one thing for every 1 of another. Real-life hooks -- Sports: a player made 6 shots and missed 2, ratio of makes to misses is $6:2 = 3:1$. Food: recipe uses 2 cups flour for every 1 cup sugar, ratio is 2:1. Money: save \$3 for every \$1 spent, ratio is 3:1. Three forms -- same ratio, three ways: 3 to 1 | 3:1 | $\frac{3}{1}$. Practice: (1) bag has 4 red and 3 blue marbles, ratio of red to blue in all three forms; (2) team won 5 games and lost 2, ratio of wins to losses. Equivalent

ratios if time: connect to fractions -- $3:1 = 6:2 = 9:3$, same as equivalent fractions, multiply both sides by the same number.

INDEPENDENT PRACTICE (40-50 MIN)

Negative numbers seed -- Segment 3 (40-60 min): Frame it: 'Most kids see negative numbers for the first time in September. You are seeing them in June.' Real-life hooks: Temperature (Detroit in January, -8 degrees means 8 below zero), Money (spend \$5 with \$0 in account = -\$5, you owe the bank), Building floors (basement 1 = -1, basement 2 = -2). Draw number line from -5 to 5 together. He places: -3, 4, -1, 0. Ask: which is bigger, -4 or -1? Rule: further left = smaller number. Absolute value -- introduce the word only: $|-3| = 3$, means distance from zero. One practice: $|-7|$ and $|2|$. Do not go further. This is a seed, not mastery.

WRAP-UP (50-60 MIN)

Gate check + celebration (final 5 min): Did he hit 3 consecutive correct fraction problems? Yes = note in progress.md: LCD method solid, FRACTION_DENOMINATOR_ADD corrected. No = fractions again next Wednesday, note the specific problem he stalled on. Name one exact thing he did better: 'You wrote all four fraction steps before you started -- that is the discipline that makes the answer right.' Preview: 'Next Wednesday we go deeper on ratios and start using variables. That is pre-algebra -- and you are going to be ready for it.'

HOMEWORK ASSIGNMENT

None assigned this session. Essay planning sheet (navon-2026-06-03) due today -- collect and review before the Sunday Reading session.

ACTIVE ALERTS

- Retention gap: open every math session with a 5-min warm-up reviewing last session's topic
- FRACTION_DENOMINATOR_ADD is still active until gate is cleared -- do not assume it is fixed
- Pay-per-session at \$40 -- no bundle active
- Next math focus after gate: ratios deeper, then equivalent ratios, then negative number operations
